

DESIGNED FOR UNEXPECTED HEROES™

A SUDDEN COLLAPSE. YOU HAVE AN AED. ARE YOU READY?

While only 50% of cardiac arrest victims will initially need a shock, all will require CPR to increase the flow of oxygenated blood to the heart and brain. The AED's first heart analysis is critical. If it calls for no shock, only high-quality CPR can lead to a shockable rhythm on the next heart analysis.

Whether you are an experienced rescuer or a first-time responder, you will appreciate how the Powerheart® G5 AED combines ease of use, reliability and advanced technology to **help victims survive sudden cardiac arrest.**

The Powerheart G5 AED with Intellisense® CPR provides corrective feedback to ensure delivery of high-quality compressions. One-button dual-language functionality and daily self-tests give rescuers the confidence to act.

- **Intellisense™ CPR Feedback**
Distinct text and voice corrective prompts for rate, depth and recoil.
- **Rescue Ready®**
Conducts daily self-tests on pads, battery and internal circuitry.
- **RescueCoach®**
Guides rescuers through each critical step of the rescue with user-paced voice/text prompts.
- **Dual-Language**
Change from primary to secondary language with the push of a button.
